

## JalTest C10-T1 Presentation

### Content:

- JalTestSoft, New functions and improvements
- Diagnostics, new functions and developments.

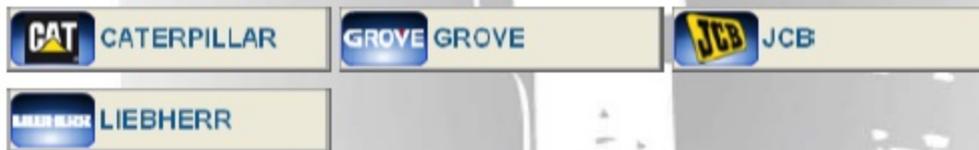

### JalTestSoft, New functions and improvements

#### 1. Three new icons in the "vehicle type selection"

For this version JalTest has included three new types of vehicles:

- Special vehicles: this includes construction machines. The following brands are included.

- Agricultural vehicles: this includes all type of vehicles designated to agricultural work.

- Engines: this includes power plants that are not installed in any vehicle.

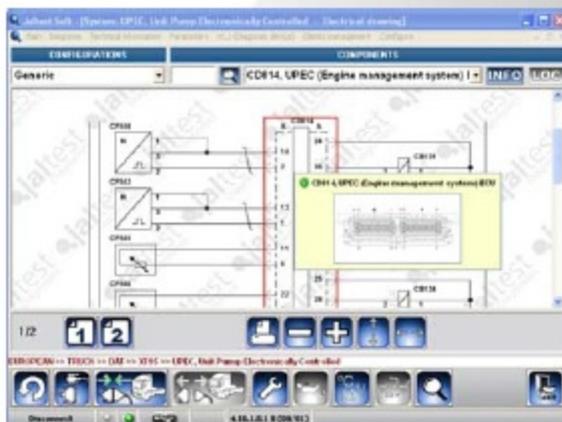

- The "system scan" icon has been deleted and it has been replaced by an option inside the system list. It has been created a new direct link to start this option. Diagnosis process has been integrated during the system scan.

When a model is selected automatically the systems options for that vehicle will appear in the right side of the window. In the top part, the option "**SS, System Scan**" will appears. To activate this function, make double click in the option and automatically the system will initiate the scan of the systems available. At the same time, JalTest will make a "diagnostic errors scan" and will show in the right side the number of errors that the system has. By making a double click, the JalTest will connect with the system.

- Improvements in the technical data sheet. It has been improved the interaction with electrical schemes

When the mouse pointer is over a component, the explanation of the component will appear and a picture of the component.

## JalTest diagnostic, new functions and improvements

### DAF

#### XF105, Serie CF Euro IV,

**DMCI**, Set parameters for individual diesel pump and injector: Each component has a code that is used to tell to the ECU which are its characteristics.

### IVECO

#### EuroCargo Euro III

**EDC7**, Switch off injectors, Individual injector disconnection.

**IBC Body computer**, New system included.

### MAN

#### Serie TG

**ZBR**, Measured values and component activation.

**EBS5**, Diagnosis memory bit reset. This is specifically to erase the safety memory.

### MB

#### Actros II, Axor II, Atego II

**ZHE**, It has been integrated measured values, component activation and parameters.

**HZR**, It has been integrated measured values, component activation and parameters.

**WS**, It has been included the option to set the oil quality and viscosity during the service process.

#### Otros modelos.

**ADM-FR**, New system integrated

**ADM2**, New system integrated

### RENAULT

#### Magnum,

**E-Tech Euro 2**, Fan clutch test

## Modelos Dxi

**Optidrive**, improvements in the calibration process for Automatic gearbox:Optidrive. It has been included the component activation.

## SCANIA

### Serie R

**EMS**, It has been included the component activation. Main highlights:  
compression test, switch-off injectors, injector test  
**APS**, Air drier calibration.

## VOLVO

### Version V2

**I-Shift**, It has been increased the measured values and the component activation options.

**EBS**, Wear pad values in the third axle has been integrated.

**ECS**, It has been improved the calibration process for pneumatic integral suspension

### Electronics 98

**EBS**, Wear pad values in the third axle have been integrated.

**ECS**, It has been improved the calibration process for pneumatic integral suspension.

## BUS / COACH

### VOITH

**DIWA 3**, Automatic transmission, New system integrated.

### Wabco

**MTS**, Modular door control system, New system integrated.
