

Campo de Criptana

May 2009

Dear distributor,

.....

From the version T2 using the JalTest Soft with V5 and Pc Link unit the users of the JalTest will be able to copy those files to the computer and also copy from the computer to the JalTest memory through a new menu in the tool (in the top menu read as 'parameters'). This option will be available in the ECUs that allow the change of parameters.

With this option customer will have the chance to ask the technical department for the file for a specific ECU configuration, with two options:

1. Sending the original parameter file of the ECU so the technical department modified it for the requested configuration.
2. Asking for a file for a certain ECU reference and specific configuration and the file will be created by the technical department. This second option will require a detailed document with the different configurations of The ECU so the technical department is able to create the right file for that system.

This procedure requires time for the engineers to create the file and convert it to JalTest language so this service will be charged depending on the expected development time.
